

Health Alert: Penicillin G Benzathine (Bicillin L-A) Voluntary Recall and Shortage

July 15, 2025

Situational Update: Bicillin L-A Recall

On July 10, 2025, Pfizer, the manufacturer of penicillin G benzathine (Bicillin L-A), issued a [voluntary recall](#) of affected product lots due to particulates identified in the syringes during visual inspection. This includes both 1.2 million units/2 mL and 2.4 million units/4 mL prefilled syringes distributed from **December 11, 2023 – June 24, 2025**.

Please **check your Bicillin stock immediately** as affected [lots](#) (see below) should be discontinued. You can find more information about credit reimbursement for returned affected lots in Pfizer's Bicillin L-A [recall notification](#).

In response to this recall and as Pfizer is the only manufacturer of Bicillin L-A, the [FDA](#) anticipates a limited supply of Bicillin L-A 1.2 and 2.4 mu doses *with no estimated recovery date*.

Bicillin L-A is the only acceptable treatment for pregnant people infected with or exposed to syphilis and should be prioritized for babies exposed to syphilis in utero. Utilizing [Pfizer's Medical Request Process](#), providers and pharmacy directors who no longer have wholesale or hospital system access to Bicillin L-A can submit a [medical request form](#) for patients who can only receive Bicillin L-A due to the risk of congenital syphilis.

Among non-pregnant adults, doxycycline 100 mg PO BID x 14 days is an acceptable alternative for those with primary, secondary, or early latent syphilis, and for those who have been exposed to a patient with infectious syphilis. Doxycycline 100 mg PO BID x 28 days is an acceptable alternative for those with late latent syphilis. [Limited data support ceftriaxone](#) as an effective therapy option for the treatment of primary and secondary syphilis, and neurosyphilis, in non-pregnant adults. [Extencilline and Lentocilin](#) were approved by FDA for temporary importation due to prior shortages and remain available.

Other intramuscular formulations of penicillin (e.g. Bicillin C-R) are *not* acceptable alternatives for the treatment of syphilis.

Actions Requested of SF Clinicians

1. Check your clinic's **Bicillin L-A** stock against the list of affected lots and discontinue using any affected lots immediately.
2. Prioritize **penicillin G benzathine (Bicillin L-A)** for pregnant people and infants with syphilis infection or exposure, and those with an allergy to doxycycline.
3. Use **doxycycline** to treat non-pregnant adults with **primary, secondary, early latent or late latent syphilis**, or who are **contacts to syphilis**, who are able to adhere to a multi-day regimen.
4. Use **alternative drugs** to treat group A strep pharyngitis and for primary rheumatic fever prophylaxis, e.g. penicillin V, amoxicillin, and azithromycin to conserve Bicillin L-A.
5. Contact **SF City Clinic** at (628) 217-6677 if you are having trouble obtaining Bicillin L-A.
